

GUARANTEED RELIABLE

GRIP™

INJECTION PERFORMANCE

STATE-OF-ART DESIGN SPECIFIC FOR YOUR LAUNDRY NEEDS.

- **GRIP IV** and **GRIP V** are specially designed for optimum performance for either tunnel or washer-extractor laundry systems.
- Powered by highly accurate and durable air-operated diaphragm pumps, the **GRIP IV** is engineered to withstand the rigors of a tunnel washer that can call for injection as frequently as every 60 seconds.
- An operator touch screen provides easy and quick setup and a read-out of system status during operation.
- The **GRIP** can track up to 99 different wash formula classifications for maximum flexibility.
- All injection pumps are programmed with unique electronic controls that assure accurate and precise chemical delivery month after month.
- Low-maintenance design allows your Gurtler representative to spend more time servicing your operation and not in the injection equipment.
- The **GRIP** pumps are all air-operated double-diaphragm, eliminating squeeze-tube replacement and failure issues.
- The double-diaphragm pumps are rated for 10 million strokes or 78,000 gallons of product delivery without maintenance!
- All chemical injections are verified to assure proper delivery every time.
- The expanded memory capabilities of the **GRIP** system allows for storage of up to five years of time-stamped data for both tunnels and washer extractors.
- The **GRIP** upright unit is engineered with a footprint as small as six square feet for operators who are short on space. The wall-mounted unit is designed for easy access and maintenance.
- Gurtler's unique calibration tubes at tunnel injection sites provide an anti-siphon air break and an easy-to-use calibration and quality control tool.
